

Wow, amazing. A photo of a baby still inside the mum's tummy!

How can they do that?

This picture is taken using ultrasound. The very high sound travels through the skin until it stops where the baby is.

Bats use ultrasound when they are hunting for help them find their prey

Is it an Xray?
Eva says no that is for bones.

Some children think with a special machine. You need sticky gel. It takes a photo through your skin with a special lens.
