

We looked at a new mystery item.

Technology materials it is made of:

Plastic

Rubber

What does it do?

- Teachers wand
- Toy crutches
- Police light
- Part of a car
- Musical Instrument
- Reflector for a bike
- Memory stick for a computer
- Night comforter reflector light

Then someone spotted the rollers and Reilly says when you roll things together it makes friction. Maybe it is used to make electricity or fire.

Then Jock remembered that it looked like the wringer for squeezing out the water when washing clothes from one of the reading books.

Actually it is for putting old tubes of toothpaste in to squeeze the last toothpaste from the bottom to the top so that it doesn't get wasted.
